

Github uploader programme project

- When user uploads files in folder called “github Upoloder”
- And open my software called github uploader to upload all project work and all
- when open this software containing ask for repository if all exist those also see by the user
- token / password if save already if not used for user
- extracted from files “github Upoloder” folder if containing unique accepted but not repeated files if repeated files of new repository is ok to upload
